SUPRIYA PAWAR

Software Engineering Manager | Cloud & Distributed Systems
+91-880-576-1258 | pawarsupriya663@gmail.com | linkedin.com

SUMMARY

Technical Software Engineering Leader with 12+ years of experience specializing in cloud-native infrastructure, distributed systems (Kubernetes/OpenShift), and microservices. Proven track record of managing high-performing engineering teams, driving technical architecture, and delivering resilient, scalable platform solutions. Adept at aligning mid-term engineering roadmaps with organizational goals while fostering a culture of mentorship and continuous delivery.

SKILLS

- **Cloud & Infrastructure:** OpenShift, Kubernetes, AWS, DevOps, Baremetal, Vagrant, Beaker
- **Software & Architecture:** Microservices, Rest-API, Distributed Systems, System Design, Data Structures
- **Languages & Frameworks:** Python, Java, Spring-Boot, Robot Framework, BDD, TestNG
- **Operating Systems:** RHEL, Fedora, Windows, Hyper-V
- **Data & Analytics:** Tableau, Agile Methodologies, Project Management

EXPERIENCE

Associate Manager, Software Engineering

Red Hat | Pune, India

01/2026 – Present

- Manage a high-performing, technical engineering team focused on core OpenShift platform architecture and releases.
- Formulate team deliverables and align engineering execution with broader corporate product goals and cloud strategies.
- Guide resource allocation, technical risk management, and milestone execution to ensure predictable project delivery.
- Establish agile engineering processes that optimize velocity, maximize code quality, and remove cross-functional friction.
- Mentor and advocate for the career development of software engineers, helping solve complex architectural and operational challenges.
- Lead system architecture reviews, defining coding guidelines and vetting complex

microservice designs; actively perform code reviews
- Formulated the 1–2 year technical vision and product roadmap for OpenShift platform releases, aligning cross-functional execution with broader infrastructure requirements."

Associate Manager, Platform Engineering & Delivery

Red Hat | Pune, India

10/2023 – 12/2025

- Navigated a highly matrixed global organization to align cross-functional engineering, product management, and SRE teams—accelerating end-to-end product delivery cycles
- Streamlined platform delivery pipelines in high-volume, cloud-native environments, reducing cycle time for system releases.
- Spearheaded technical execution and quality guardrails for the **Red Hat Certification Program**, ensuring absolute downstream compatibility.
- Managed technical escalations and led engineering post-mortems to drive structural improvements in software infrastructure.

Senior Software Engineer

Red Hat | Pune, India

04/2016 – 10/2023

- Architected scalable, distributed automation frameworks from scratch, utilizing Python and BDD methodologies.
- Designed microservice and API infrastructure patterns that enhanced system stability, usability, and data ingestion metrics.
- Built and maintained system telemetry dashboards using Tableau to provide real-time health and reliability reporting.
- Founded an internal technical mentorship initiative, increasing overall team technical capacity and deep domain expertise.

PROJECTS

OpenShift Edge Enablement (TNF Two Node Fencing)

- **Architectural Challenge:** Built cost-effective container management solutions optimized for edge deployments, leveraging a topology consisting of two control plane nodes with no additional compute nodes.
- **Impact & Implementation:** Developed and integrated validation systems to ensure architectural resilience to single node-level failures, achieving high-availability without requiring a traditional three-node footprint.

Red Hat Certifications Platform

- **Architectural Challenge:** Built and maintained compatibility validation systems for enterprise-grade infrastructure, including Red Hat Enterprise Linux, Red Hat OpenShift, and Red Hat Gluster Storage.
- **Impact & Implementation:** Directed end-to-end integration workflows and designed core Python automation frameworks to scale compatibility testing across diverse hardware/software ecosystems.

Real-Time Ad Bidding Platform (DSP & Bidder)

- **Architectural Challenge:** Designed backend execution strategies for high-throughput Demand Side Platforms (DSP) and bidding microservices.
- **Impact & Implementation:** Designed a module-wise validation framework from scratch; architected a Python backend automation suite using the Robot Framework that lowered software integration risks and streamlined error tracking.

Virtual Network Security Engine (Hyper-V)

- **Architectural Challenge:** Deployed a virtual security firewall for virtual switches to ensure data path isolation and regulatory compliance across multi-tenant cloud environments.
- **Impact & Implementation:** Optimized virtual network service data path integration for transparent insertion, enabling strict administrative segregation across network and server teams.

EDUCATION

Bachelor of Engineering – Information Technology PVG's College of Engineering and Technology | *Graduated: 01/2013*

KEY ACHIEVEMENTS & CONTRIBUTIONS

- **Professional Certifications:** Red Hat Certified System Administrator (RHCSA – Active)
- **Awards:** Red Hatter of the Quarter (FY18Q1) | Automation Champion Award
- **Technical Public Speaking in Conferences:**
    - *Quality Camp:* Linchpin + Beaker Infrastructure Provisioning
    - Next-Generation Platform Engineering with TestNG
    - Scalable System Automation Frameworks with Robot
